REAL FARMERS USE
MiCROP+

Planting and Topdressing Fertilizer

Standard farmer practice

YIELD CHANGE

MiCROP+ makes the difference

Benefits of using **MiCROP+** Program

1. Balanced nutrition: Provides 5 nutrients (Nitrogen, Phosphorous, Potassium, Sulphur and Zinc) important for increased maize productivity.
2. Roots development: Presence of Zinc aids in better root development which translates to better crop establishment and uptake of nutrients.
3. Increase yield: Zinc and Potassium are important for better grain filling, and increased grain weight in maize.
4. Healthy crop due to uniform application of Zinc to each granule of fertilizer.
5. Sulfur is deficient in most soils. Its presence improves utilization of Nitrogen, increasing maize yield and reducing susceptibility to diseases.
6. Assured quality – from the makers of Chapa Meli fertilizers.

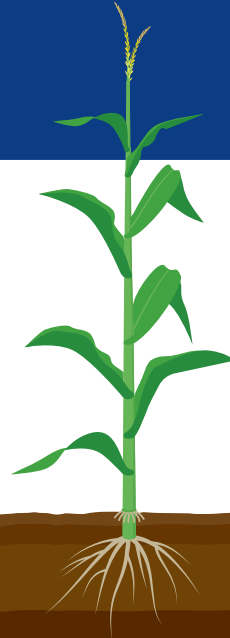

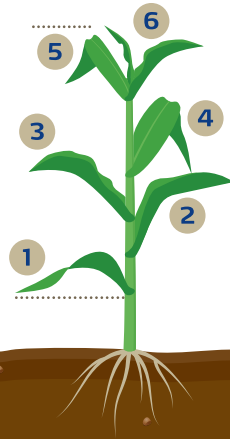

Grow Maize profitably with the Yara MiCROP+ Nutrition Program

How to apply fertilizer:

MORE YIELD

IMPROVED GRAIN GRAIN FILLING

INCREASE PROFITS
(REDUCED COST OF PRODUCTION)

Planting

MiCROP+

PLANTING FERTILIZER

50 - 75 Kg/acre

4-5 leaf stage

YaraVita™

CROP BOOST™
MiCROP+ TOPDRESSING

CROP BOOST - 1 Litre/Acre
MiCROP+ Top - 50 Kg/acre

Before Tasseling

MiCROP+

TOPDRESSING FERTILIZER

50 Kg/acre
